# Core Competencies

## Network Design & Operations:

The new normal of business is bringing rapidly expanding and increased volume of information being digitized and communicated over networks of computers and devices. We can help you navigate towards the right solutions of information and communication systems through design, deployment and administration of scalable data networks, and telecommunication infrastructures.

## Cybersecurity Compliance:

All business-critical networks and information systems start from well-thought-out network

design followed by solid policies, processes and practices. With our demonstrated experience in cybersecurity policies and best practice compliance, we offer consulting and assessments for public and private sector businesses based on validated frameworks and guidance.

## Information Technology Support:

Use us as your resource for building and maintaining the posture for a secured and operable IT system. We offer remote and onsite IT support to small businesses and nonprofit organizations to help their systems thrive. Our services include operational management of hardware and software, and strategy and planning to analyze current conditions in order to support future needs.

# Our Certifications
